

## **Only Natural Pet Store Chronic Ear Infection Kit for Cats**

Chronic ear infections and yeast problems are frequently a sign of allergies. Allergies are becoming more and more common and troublesome in companion animals. The supplements and ear wash in this kit will assist in the remediation of chronic ear infections caused by allergies.

**Only Natural Pet Salmon Oil** – Start with ½ the dosage recommended on the bottle for your cat's weight (add to food) and gradually increase to full dose over several days. The dosage can be increased to 1 1/2 to 2 times that recommended on the bottle if needed – do this gradually over the course of a week. Dosage can be split between two meals. If your cat develops loose stools, then reduce the dosage a bit.

Salmon oil provides Essential Fatty Acids (EFA's), which help reduce inflammation and nourish your companion's skin, coat and digestive tract.

**Animal Essentials Plant Enzymes & Probiotics** – These should be given at EVERY meal. Enzymes are dosed by volume of food, not by the weight of the animal. Follow dosage instructions on the container for each meal.

Digestive enzymes aid in the breakdown of food and enhance nutrition while probiotics support the restoration of beneficial gut flora and the healing of the digestive tract.

**Animals' Apawthecary Herbal Ear Rinse** – Use as directed as needed to relieve symptoms while your companion's system begins the healing process from within.

**Please Note:** We HIGHLY recommend using a high quality allergy formula food while treating your companion for chronic ear infections and allergies. Avoid common allergens such as wheat, soy, corn, beef and chicken in food and treats. Please take the time to read the article entitled "What You Should Know About Your Pet's Food" on our website in the "Newsletter Articles" section.
